

**MOULTON-NIGUEL WATER DISTRICT  
DIRECTOR, DIVISION 1**

**PARI DEZHAM**

**OCCUPATION:** Manager of Environmental Compliance, Inland  
Empire Utilities Agency

As a resident of Mission Viejo, I have seen tremendous growth and change within our community. I am offering my service to meet the critical water needs as our region rapidly develops into the 21st century.

Four major issues facing us:

The management of local water demand.

The cost of the imported water.

Implementing regional water management programs, and

Expanding our water conservation and recycling programs.

My 25 years of experience within public sector of the water industry enable me to address the complex issues confronting this District, assuring you the exploration of innovative, cost-effective, and long term solutions.

Your vote, November 2, 2004, will be for a woman, who has experience providing innovative and aggressive policy level input to local government, who understands and promotes the balance between water rates and service, and who truly understand statewide water issues.

My priorities include better lines of communications between Moulton Niguel Water District, local government agencies, school districts, emergency services, and all local residents. I strongly support the use of recycled water as well as other innovative water conservation strategies. Water is the most critical element of life.
